

Science investigations – based on Mr Massey’s lessons with year 4

Adaptations and habitat

Have a look around at other **living things** (science word: **organisms**). These could be in your house, in your garden or just through the window. Remember that living things include plants and fungi.

Make a list of what you find. If you don’t know the names of things, just describe them.

What **habitats** are these living things from (in the wild)? How do you know?

What things can these organisms do that humans cannot?

How many did you do?

1-5: beginner

6-10: good try

11-20: proper scientist

More than 20: David Attenborough!!

Special investigation

If you have a torch and you’re allowed, try sneaking around the house at night. Peer into cupboards, corners and places you don’t normally go. You may be surprised by the animals that you’ll find.

These creatures are **nocturnal** (they come out at night).
